Online Covid-19 Screener

OVERVIEW

The system allows for an online questionnaire to be completed prior to visiting the practice. This link is accessed in a secure personalised location per practice. The system consists of three simple components, two of which is specifically designed for cell phones. The solution will allow the patient to complete an online Covid questionnaire and once they arrive at the practice they will be complete it by entering their temperature. This provides you with an online overview of all the persons who have completed the questionnaire. Only your practice will be able to review their answers.

FUNCTIONALITY

Patient completes the form:

The practice sends a specific link out to all their patients either via SMS or even WhatsApp. Each individual practice will get their own specific link.

NB: due to us using a self-signed certificate, the user will be requested to ensure this is a valid site. They just need to continue to it.

Patient is requested to enter his/her cell number. If it is the first time the patient accesses the specific facility (REF in this case) he/she will be prompted for their information.

Patient completes and submits the form.

The following information/feedback will be displayed depending on the result:

If **no** symptoms are present:

The screenshot shows a dialog box titled "Confirm Information" with a close button (X) in the top right corner. The main text reads: "Thank you. Enjoy your visit." This text is highlighted in green. Below this, a paragraph states: "The completion of this screening tool is a formal declaration that the information you provide is true and accurate. Untruthful answers place all in this facility at risk. Should it come to our attention that you misrepresented the facts we reserve the right to escalate in accordance with the COVID 19 and Disaster management regulations to the relevant authorities." Below the paragraph is the question "Do you want to proceed?". At the bottom right, there are two buttons: "Cancel" and "Confirm".

If **some** symptoms are present:

The screenshot shows a dialog box titled "Confirm Information" with a close button (X) in the top right corner. The main text reads: "Minor symptoms. Rather stay at home." This text is highlighted in orange. Below this, a paragraph states: "The completion of this screening tool is a formal declaration that the information you provide is true and accurate. Untruthful answers place all in this facility at risk. Should it come to our attention that you misrepresented the facts we reserve the right to escalate in accordance with the COVID 19 and Disaster management regulations to the relevant authorities." Below the paragraph is the question "Do you want to proceed?". At the bottom right, there are two buttons: "Cancel" and "Confirm".

Should **more** symptoms be present:

The screenshot shows a dialog box titled "Confirm Information" with a close button (X) in the top right corner. The main text reads: "Alert - stay home or visit a medical facility." This text is highlighted in red. Below this, a paragraph states: "The completion of this screening tool is a formal declaration that the information you provide is true and accurate. Untruthful answers place all in this facility at risk. Should it come to our attention that you misrepresented the facts we reserve the right to escalate in accordance with the COVID 19 and Disaster management regulations to the relevant authorities." Below the paragraph is the question "Do you want to proceed?". At the bottom right, there are two buttons: "Cancel" and "Confirm".

Irrespective, the patient will be able to get a QR code – as we are not at liberty to prevent anyone from obtaining one.

We simply reflect the inputs.

On confirm, the patient is issued with the QR Code. This code must be presented at the practice on entry. The code can be saved as an image or regenerated by just entering your cell number again on the link. If a valid code exists, it will be shown immediately without having to capture anything else. IF the code expired (after 24 hours) the information is loaded automatically, but the questions needs to be answered again.

Practice scans the code:

The practice will scan the QR code and be directed to a website.

The QR code will indicate if it is valid for the specified practice.

The actual contact is confirmed when the practice measures and enters the temperature for the patient on the reader screen.

Managing the entries:

Viewing entries submitted is accessed through the link
<https://server.go.dyndns.org/covid/grreader/login.php>

Each practice will be assigned a unique username and password. By entering these the practice will be able to view, print and email all their respective entries.

INVESTMENT REQUIRED

Currently we are charging a once off setup fee plus travel.

Your version of Eminance will have to be updated as well.

Another is for sending SMS with the link to patients. You may use WhatsApp to send the link.

Yet again, Health Focus brings you another first in practice management systems.

For more information or for setting this up contact software support on either 087 750 8157 or 021-790 1124
